9.KINIK Symbol

KINIK Symbol

Conventional abrasives

Abrasive	Feature	Application
A	Brown aluminium oxide, hard and tough.	This is the most common used abrasive, especial for heavy duty grinding on general steels.
FA	The characteristic is between A and WA.	Special for precision grinding on alloy steels.
WA	White aluminium oxide, more friable than A.	Suitable for light grinding on general and hardened steels.
19 A	Mixed abrasive of A and WA.	Precision grinding on alloy steels with low hardness.
FSA	Mixed abrasive of WA and FA	Precision grinding on alloy steels with medium hardness.
PA	Pink aluminium oxide, tougher than WA.	Good for precision or large surface grinding on hard Alloy steels and tool steels.
RA	Red aluminium oxide, tougher than PA	Good corner-holding characteristics that are needed For precision grinding.
32 A	Monocrystalline aluminium oxide, harder and tougher than WA, with sharp cutting edge	Precision grinding of high hardness tool steel and general grinding.
93 A	Mixed abrasive of WA and RA	Mainly used for hardened steel and stainless steel.
KG	Ceramic aluminium oxide.	For the need of long tool life and high material removal rate grinding wheels.
80 A	Similar to 32A	Precision grinding of high hardness tool steel and general grinding.
C	Black silicon carbide, harder and more friable than WA.	Suitable for non-ferrous metals, rubber, plastic, ceramics, glass and cast iron.
GC	Green silicon carbide, harder and more friable than C.	Besides the application of C, it's also used to grind solid carbide tools.

Please feel free to contact our sales engineer for more product information with your requirements.
